Table of Contents

1. Executive Summary

Key Metrics, Critical Issues & Quick Wins

2. Audit Categories

What Works

Findings by Severity

3. Action Plan

Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **explore21.com** for a **Bitcoin Blockchain Explorer Tool (SaaS/Free Tool)** site, generated on June 16, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

30/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Info:** robots.txt returns HTML — Angular SPA intercepts all paths including /robots.txt
2. **Info:** HTTPS not enforced — http://explore21.com serves without redirect; www redirects to HTTP
3. **Info:** No security headers — missing HSTS, CSP, X-Frame-Options, X-Content-Type-Options
4. **Info:** Angular CSR-only (no SSR) — no server-rendered content visible to crawlers
5. **Info:** Zero schema markup — no JSON-LD, no structured data of any kind

Quick Wins:

1. Create static robots.txt and configure Nginx to serve before SPA fallback (30 min)
2. Enable Cloudflare Always Use HTTPS and fix www redirect to https:// (15 min)
3. Add security headers via Cloudflare Transform Rules (20 min)
4. Rewrite title tag to include primary keywords (5 min)
5. Add og:image and Twitter Card meta tags for social sharing (1 hour)

2. Audit Categories

2.1 Technical SEO

Score: **35/100**

What Works

- HTTPS on main domain via Cloudflare
- HTTP/2 and HTTP/3 (alt-svc h3) enabled
- Gzip compression (460KB main.js → 142KB)
- Cloudflare CDN with fast TTFB (~92ms from SOF edge)
- Critters critical CSS inlining active
- html lang='en' set correctly

Findings

robots.txt Returns HTML (Angular SPA Intercept) Critical

GET /robots.txt returns text/html with Angular SPA shell (HTTP 200). Googlebot cannot parse crawl directives. All well-known file paths (sitemap.xml, llms.txt, security.txt) return the same SPA shell.

Recommendation: Create /src/assets/robots.txt as a static file. Configure Nginx: location = /robots.txt { root /var/www/explore21/assets; try_files /robots.txt =404; }

sitemap.xml Returns HTML Critical

GET /sitemap.xml returns text/html (200 OK). No XML sitemap exists. Google cannot discover or inventory site pages.

Recommendation: Create static sitemap.xml listing homepage and key tool pages. Serve like robots.txt. Submit to Google Search Console.

HTTP Not Redirected to HTTPS Critical

http://explore21.com returns 200 OK over plain HTTP. No redirect to HTTPS. Users on HTTP are exposed to MITM attacks.

Recommendation: Enable Cloudflare 'Always Use HTTPS' in SSL/TLS settings.

www Redirects to HTTP Instead of HTTPS **Critical**

<https://www.explore21.com> issues 301 redirect to <http://explore21.com/> — downgrading from HTTPS to HTTP. This is a security vulnerability.

Recommendation: Add Cloudflare Redirect Rule: www.explore21.com → [https://explore21.com\\${uri}](https://explore21.com${uri}) (301)

No Security Headers **High**

Missing: Strict-Transport-Security, Content-Security-Policy, X-Frame-Options, X-Content-Type-Options, Referrer-Policy, Permissions-Policy. Site is vulnerable to clickjacking, MIME sniffing, and protocol downgrade attacks.

Recommendation: Add via Cloudflare Transform Rules: X-Frame-Options: SAMEORIGIN, X-Content-Type-Options: nosniff, Referrer-Policy: strict-origin-when-cross-origin, HSTS: max-age=31536000

Angular CSR-Only — No Server-Side Rendering **High**

Pure client-side Angular SPA. HTML shell contains only `<app-root></app-root>`. All meta tags are static — every page shares the same title/description. Googlebot must execute JavaScript to see any content.

Recommendation: Implement Angular Universal SSR (ng add @nguniversal/express-engine) or Angular 17+ built-in SSR. Minimum: implement Angular Meta service + Router-based meta tag updates per route.

No Canonical Tag **High**

No `<link rel='canonical'>` found. Same content accessible via <http://>, <https://>, and potentially with/without trailing slash.

Recommendation: Add canonical tag to index.html. Update dynamically per route via Angular's Meta service.

2.2 Content Quality

Score: **28/100**

What Works

- Meta description present and reasonable length (112 chars)
- Meta keywords include relevant terms
- Tool appears functional (Bitcoin explorer)

Findings

Zero Indexable Content — JS-Rendered SPA **Critical**

HTML shell contains no visible text content. `<app-root></app-root>` is empty without JS execution. Crawlers without JS execution see no content whatsoever.

Recommendation: Implement SSR to server-render at minimum the homepage content.

E-E-A-T Score: 18/100 **Critical**

No Experience or Expertise signals. No About page, no team info, no data source citations, no contact info. Trustworthiness extremely low for a financial tool (crypto explorer).

Recommendation: Create About, Privacy, Terms, Contact pages. Add data source attribution. Consider adding team/founder information.

Brand/Domain Mismatch **High**

Product is called 'BTC Insights' but domain is explore21.com. No brand alignment. Users won't remember the domain. AI systems will be confused about citations.

Recommendation: Either rebrand to align with domain (explore21.com) or acquire btcinsights.com or btcinsights.io.

Missing Essential Pages **High**

No /about, /privacy, /terms, /contact, /faq pages with real content. All return the SPA shell. These are E-E-A-T signals and trust factors, especially for a crypto tool.

Recommendation: Create static content pages with 300+ words each. Start with Privacy Policy and About page.

No Content Hub **Medium**

Tool-only site with no educational content. Competitors (mempool.space, blockchain.com) have rich blog/resource sections capturing long-tail traffic.

Recommendation: Create /learn or /blog with Bitcoin explorer tutorials and concept explanations.

2.3 On-Page SEO

Score: **32/100**

What Works

- Meta description 112 chars (acceptable length)
- og:title and og:description present
- og:type: website set
- charset and lang attributes correct

Findings

Weak Title Tag — No Keywords **Critical**

Title is 'BTC Insights' (11 chars). No target keywords. Does not describe page purpose to users or search engines.

Recommendation: Change to: 'Bitcoin Blockchain Explorer – Address & Transaction Lookup | BTC Insights'

Missing og:image **High**

No Open Graph image. Shared links on Discord/Telegram/X show no preview. Critical for crypto community engagement.

Recommendation: Create 1200x630px branded image. Add og:image, og:image:width, og:image:height meta tags.

Missing Twitter Card **High**

No twitter:card meta tag. X/Twitter shows no rich preview for shared links.

Recommendation: Add: <meta name='twitter:card' content='summary_large_image'> and related twitter:* tags.

Missing og:url and og:site_name **Medium**

Open Graph URL and site name not specified.

Recommendation: Add: <meta property='og:url' content='https://explore21.com/'> and <meta property='og:site_name' content='BTC Insights'>

Viewport Blocks Zoom — Accessibility Violation **Medium**

user-scalable=no and maximum-scale=1 prevent zooming. Violates WCAG 1.4.4 (Resize Text, Level AA).

Recommendation: Change to: <meta name='viewport' content='width=device-width,initial-scale=1'>

2.4 Schema / Structured Data

Score: **5/100**

Findings

Zero Schema Markup **Critical**

No JSON-LD, Microdata, or RDFa detected anywhere. No WebSite, Organization, SoftwareApplication, or BreadcrumbList schema.

Recommendation: Add WebSite + SearchAction schema (enables Google Sitelinks Search Box), Organization, and SoftwareApplication. See FULL-AUDIT-REPORT.md Section 4 for ready-to-use JSON-LD code.

2.5 Performance (CWV)

Score: **45/100**

What Works

- Fast TTFB: ~92ms (Cloudflare CDN)
- HTTP/2 + HTTP/3
- Gzip compression enabled
- Critical CSS inlined (Critters)
- Non-critical CSS deferred (media=print onload trick)

Findings

FontAwesome Synchronous Load — Render Blocking **Critical**

`<script src='kit.fontawesome.com/...'>` with no async or defer. Blocks rendering by 300-500ms.

Recommendation: Add defer attribute: `<script defer src='https://kit.fontawesome.com/8a3442c427.js' crossorigin='anonymous'>`

Google Fonts via @import — Worst Loading Pattern **High**

`@import url(fonts.googleapis.com)` in inline CSS blocks CSS parsing, delaying FCP by 200-400ms.

Recommendation: Replace with: `<link rel='preconnect' href='https://fonts.googleapis.com'> + <link rel='stylesheet' href='...'>` in `<head>`.

Angular CSR — JS-Gated LCP (3-7s on mobile) **High**

Largest Contentful Paint blocked until 460KB JS loads and executes. Estimated LCP: 3-7s on typical mobile connection.

Recommendation: Implement Angular Universal SSR to server-render first paint.

Short Cache TTL on Hashed Static Assets **Medium**

max-age=63,675s (~17h) on hash-named JS/CSS files. Files with content-hash are safe to cache for 1 year.

Recommendation: Set Cache-Control: public, max-age=31536000, immutable for all *.hash.js and *.hash.css files.

2.6 AI Search Readiness

Score: **34/100**

What Works

- Domain responds to HTTPS requests
- Cloudflare CDN accessible by AI crawlers

Findings

No llms.txt — AI Crawler Guidance Missing **High**

/llms.txt returns the SPA HTML shell (200 OK). No explicit RSL 1.0 compliance file for AI crawlers.

Recommendation: Create /src/assets/llms.txt with explicit allow rules and site description. Serve as static file.

Uncitable — No Static Authority Content **High**

AI systems (ChatGPT, Claude, Perplexity) cannot cite this site reliably. No About page, no author attribution, no static explanatory content.

Recommendation: Create About page with 200+ words. Add Organization schema. Build static FAQ content.

Brand/Domain Confusion for AI Citations **Medium**

AI systems would cite 'explore21.com' but the brand is 'BTC Insights' — confusing for users trying to find the cited tool.

Recommendation: Add og:site_name='BTC Insights', Organization schema with sameAs links.

2.7 Images

Score: **20/100**

What Works

- Favicon present (/favicon.ico)

Findings

No Social Preview Image (og:image) **High**

No og:image means blank previews when links shared on Discord, X, Telegram, Reddit — all key crypto community platforms.

Recommendation: Create 1200x630px branded image. Add og:image and twitter:image meta tags.

3. Action Plan

Phase 1: Critical Fixes Week 1 (2-4 hours)

- P1.1 Create static robots.txt and fix Nginx routing (30 min)
- P1.2 Enable Cloudflare Always Use HTTPS + fix www redirect to https:// (15 min)
- P1.3 Add security headers via Cloudflare Transform Rules (20 min)
- P1.4 Create static sitemap.xml and submit to Google Search Console (30 min)
- P1.5 Rewrite title tag with primary keywords (10 min)
- P1.6 Add og:image (1200x630), og:url, og:site_name, Twitter Card meta (1 hour)
- P1.7 Add WebSite + SoftwareApplication JSON-LD schema to index.html (30 min)
- P1.8 Remove user-scalable=no from viewport meta (5 min)

Phase 2: High-Impact Improvements Weeks 2-3 (20-30 hours)

- P2.1 Implement Angular dynamic meta tags per route (3-4 hours)
- P2.2 Fix FontAwesome defer + replace Google Fonts @import (2 hours)
- P2.3 Create About, Privacy, Terms, FAQ, Contact pages (8-10 hours)
- P2.4 Create static llms.txt for AI crawler guidance (30 min)
- P2.5 Fix static asset Cache-Control to 1 year (30 min)
- P2.6 Set up and verify Google Search Console (1 hour)

Phase 3: Content & Authority Month 2 (40-60 hours)

- P3.1 Implement Angular Universal SSR (15-20 hours)
- P3.2 Implement route-level lazy loading to reduce main.js bundle (4-6 hours)
- P3.3 Start link building: Bitcoin.org, CoinMarketCap, GitHub open-source
- P3.4 Create 3-5 blog/learn articles targeting long-tail Bitcoin queries

Phase 4: Monitoring & Iteration Ongoing

- Weekly Google Search Console review
- Monthly PageSpeed/Core Web Vitals audit
- Monthly security headers check (securityheaders.com)
- Monthly backlink monitoring

- Quarterly full SEO re-audit

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO — Google SEO Intelligence Skill — June 16, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
